

got gophers? squirrels?

We're KABOOM! Instant Rodent Control, a fully licensed, registered and insured underground pest management service. Supporting a clean environment and the farmers, ranchers and vineyard owners who want to protect their land from damage caused by burrowing rodents without the use of pesticides and toxins. Specializing in subterranean rodent eradication, KABOOM! utilizes an environmentally safe, green approach to rid your property of any unwanted underground pests.

Our process requires an on-site inspection to identify not only the type of pest, but the extent of likely damage caused. KABOOM! locates the freshest tunnel systems utilizing iron probes and small shovels. Most infestations contain an intricate system of burrows and adjoining tunnels, homes to one or more families of targeted pests. Once access to a burrow is gained, a series of underground blasts are then performed. Creating a precisely measured combination of oxygen and propane, these gases are delivered into the tunnel structure and then ignited by the operator. The blasts instantly kill the targeted pests and collapse the existing tunnel structure preventing immediate

reinfestation. Through this process KABOOM! is able to attain a 90% effective kill rate on the first application.

It is impossible to totally eliminate any rodent problem due to migration, movement, and the prolific breeding habits of these pests, therefore a regular maintenance program is advised. KABOOM! works with clients to develop a schedule and budget to suit any need. Besides, most follow up treatments are short and to the point when dealing with any rogue rodents. These plans can be semi-annual, tri-annual, quarterly or even monthly depending on the size of the property and the time of year. Regularly scheduled maintenance programs insure large properties can be effectively managed without major reinfestation or use of poisons.
